AUGUST 2018 | ISSUE 1

GETTING BACK ON OUR FEET

We wrapped up last season bringing home the Chairman's award after making it to state qualifiers. Upon returning to our school, we were faced with a new obstacle, relocating from our room within the school building to a trailer outside the school.

Our team has just finished our initial two week boot camps. During these two weeks, the kids learned the basics of their respective sub teams. They are now more ready to engage in the world of robotics and go to their first competition.

OUR SUMMER

This summer, apart from moving into our new room, we also hosted our annual summer camp. True North Real Estate was generous enough to allow us to use their facilities in order to hold a week long summer camp for kids to learn about STEM. The kids who came engaged in various activities ranging from creating egg drop devices to building electric cars.

LOOKING AHEAD

We will be using our robot from last year at GRITS, but the new members will be creating their own mechanism to add to the robot, furthering their skills and learning how competitions work before the FIRST build season, and allowing us to more accurately decide who will make the FRC team. GRITS will be held at Blessed Trinity Catholic High School this year.
